

FACILITIES, EQUIPMENT, AND OTHER RESOURCES

The High-Performance Materials Institute (HPMI) at Florida State University is recognized nationally and internationally as a leader in developing cost-effective high-performance composite materials and systems. HPMI uses feasibility analysis, proof-of-concept demonstration and prototype testing to develop innovative technologies and solutions for the design, manufacturing, and characterization of advanced materials. The institute has a close working relationship with the composite materials industry and government laboratories. HPMI has state-of-the-art composite materials design, processing and characterization equipment.

Most of the equipment, totaling over \$22M, is located in the 45,000 square foot Materials Research Building.
